

New approach within the FAR CME Program update courses was initiated recently.

The first particular workshop for CME Program fellows was organized on actual topics of Obstetrics- Gynecology. The workshop was held on April 17th, in Yerevan. 6 actual topics on Obstetrics and Gynecology were delivered to participants by CME Program trainers -volunteers, leading specialists of YSMU clinical departments. Two very actual topics have been presented by FARFAA Medical leaders Dr. Gevorg Yaghdjyan and Dr. Bella Grigoryan.

The most significant fact is that some of participants came from the farthest regions of Armenia (Meghri, Kapan)as also one curious fact also has been mentioned: Dr. Narine Tumanyan from Ijevan, did climb 300 meters trough mountain forests for reaching the road to Yerevan (last week the main road Ijevan-Dilijan-Yerevan was destroyed about of 300 meters, see attached picture). This is really heroic approach towards to obtaining new medical skills.
